Lego Scrum City vs. How we did it

Software Engineering Process Module Release Plan

CW ²	Topic	Scrum Game
1	Agile Manifesto & Scrum Intro	Team building and Product vision
2	Agile Requirements Management	User Stories, Product Backlog
3	Estimation and Planning	Estimate User Stories, plan first Sprint
4	-	Build the city in Sprints
5	Debriefing	-

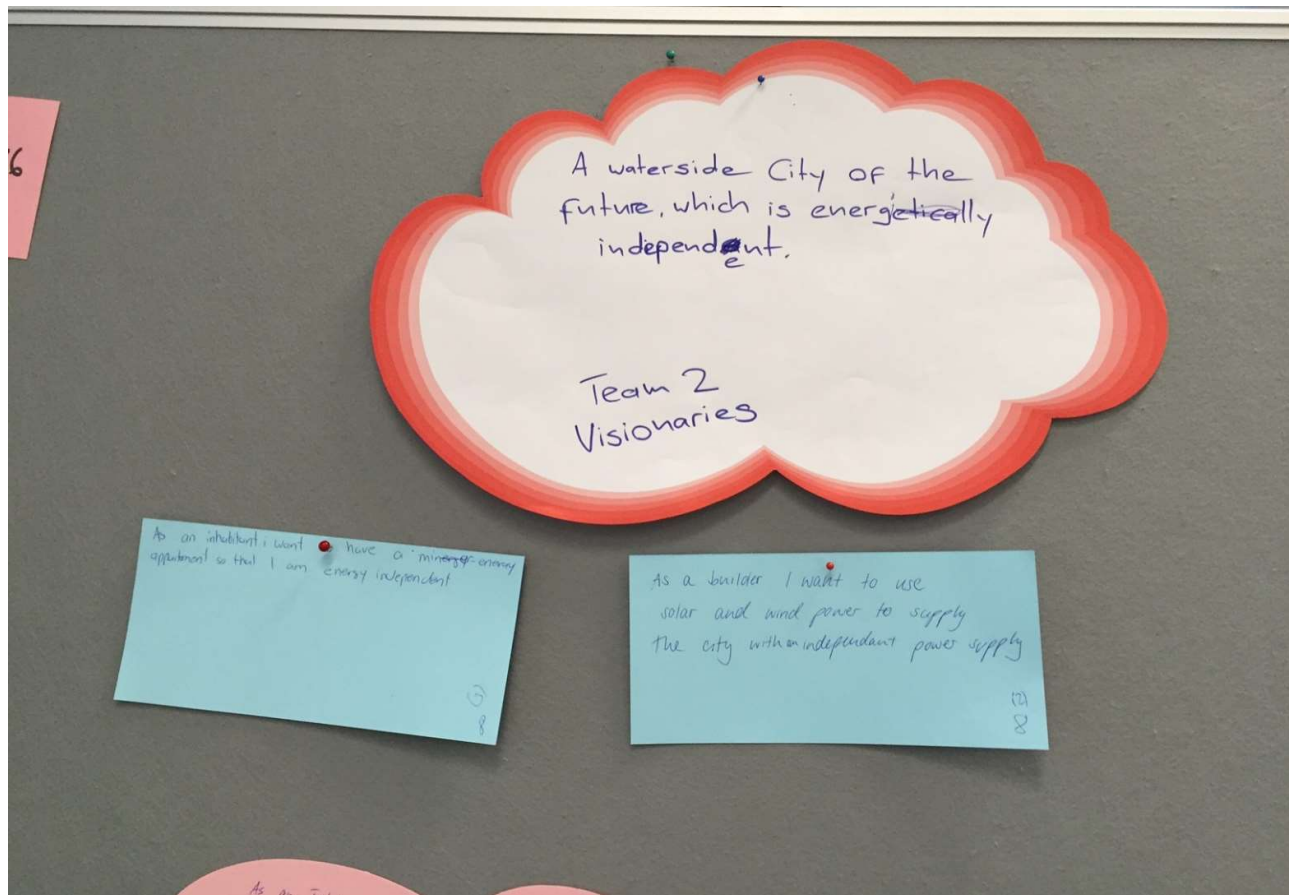

Weekly Structure – Three hour lesson block

- Brief Warm-Up
- Theory (20 – 30 minutes)
- Hands-on via game (90 minutes)
- Online Quiz and Feedback Survey (15 minutes)

Week 1 - Team Building

Week 1 - Product Vision

Week 2 - Writing User Stories

Week 3 - Estimation and Planning

Week 4 - Finally Sprinting!

Timebox

Sprinting

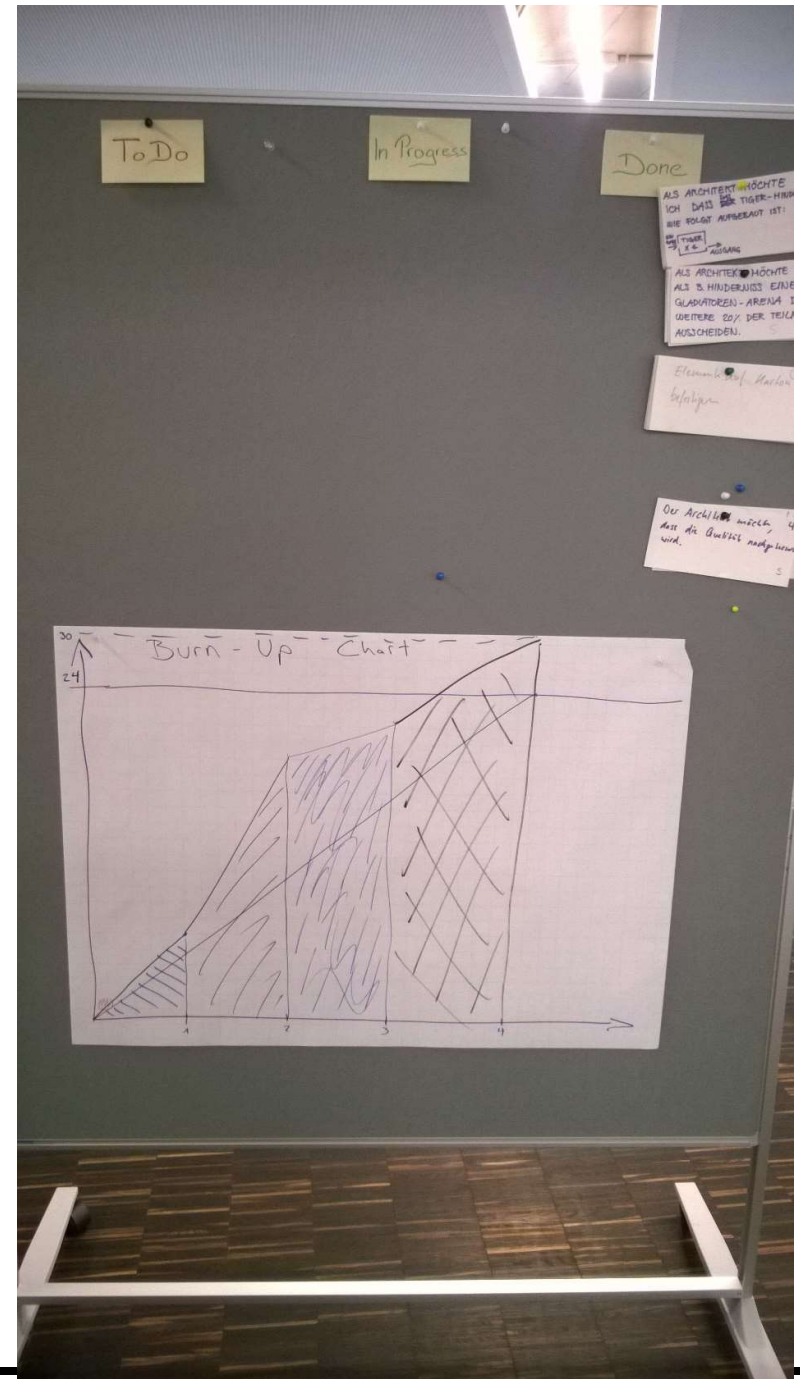

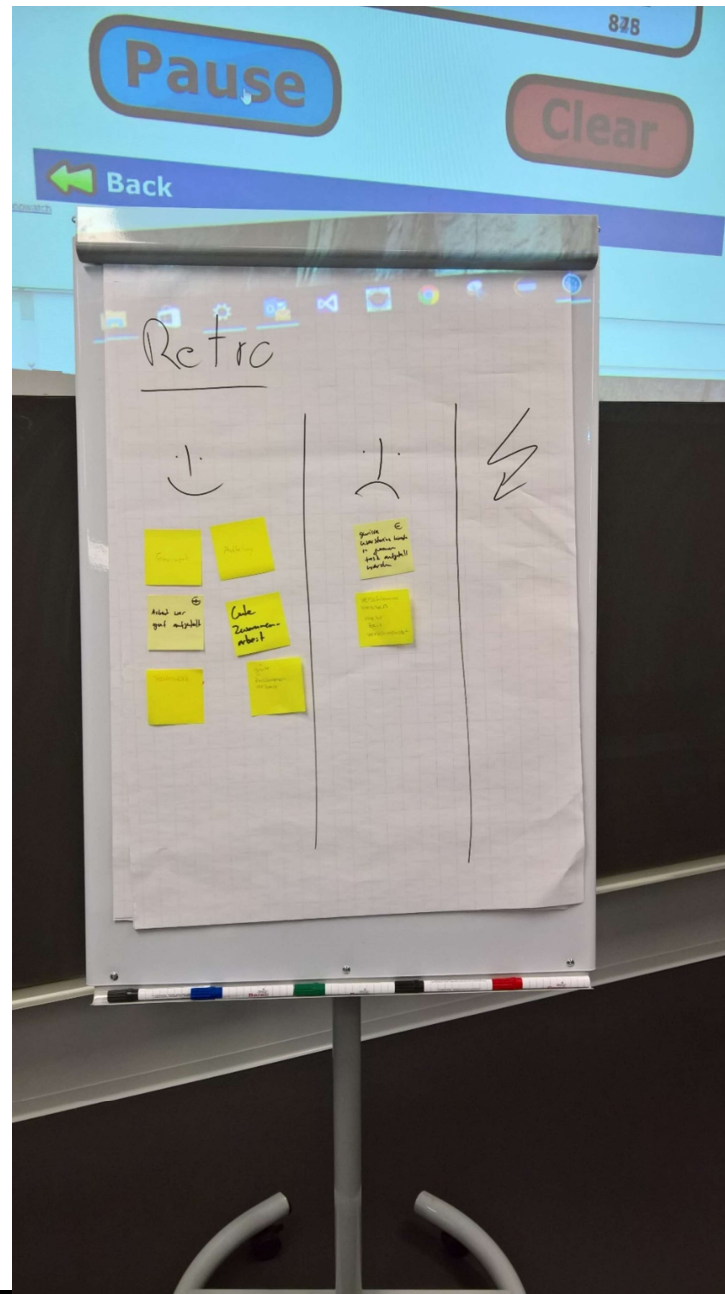

Demo and Review

Metrics - Burndown / Burnup Chart

Retrospective

The Product - Future City

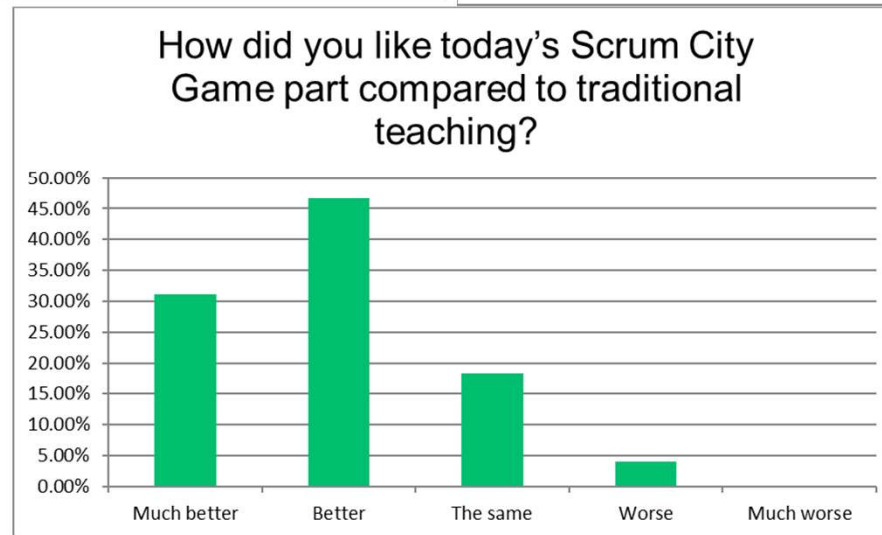

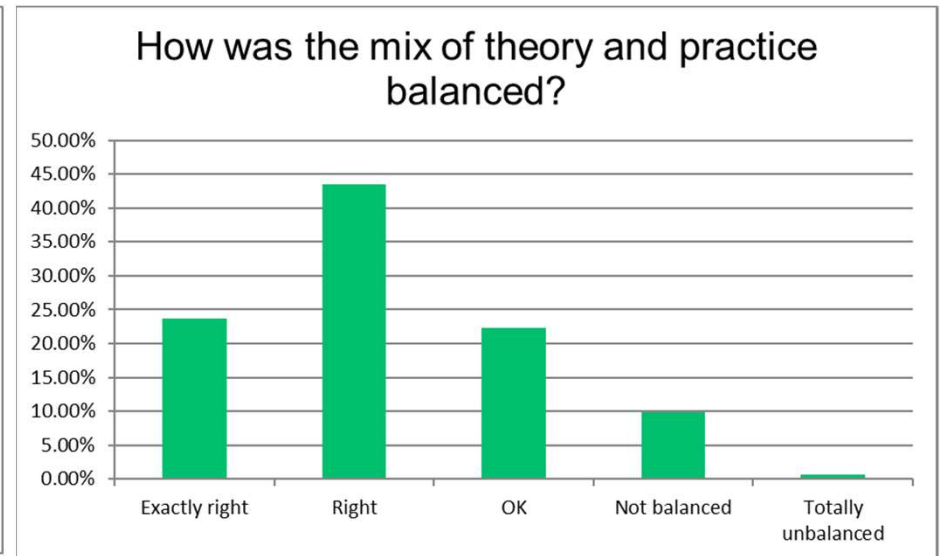

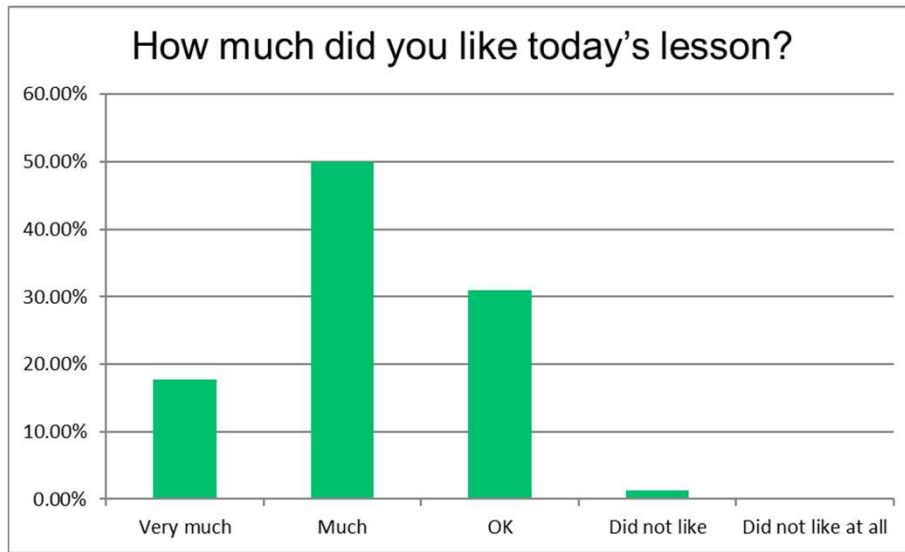

The Green City

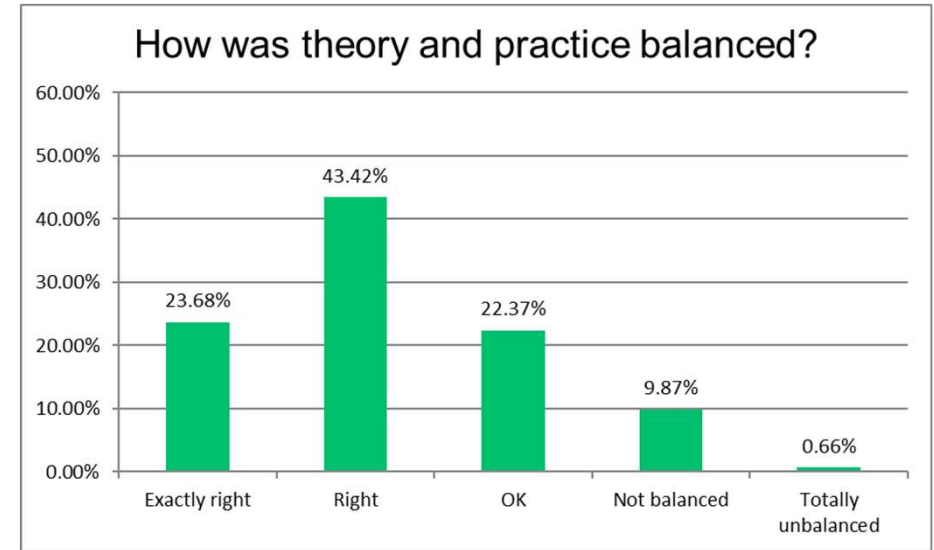

Weekly Lesson Survey - Tool: Socrative

- (1) How much did you like today's lesson?
- (2) How balanced was the mix of theory and practice?
- (3) How did you like today's Scrum City Game part compared to traditional teaching?
- (4) What are your three most important learnings from the Scrum City Game for today?
- (5) What did you like most of today's Scrum City game part?
- (6) What could be improved of today's Scrum City game part?

Some Statistics

Some Statistics

Game 4L-Retrospective

Course 2017 Debriefing

Feedback / Comments

Liked:

- Practicing theoretical concepts
- Fun
- Teamwork
- Gaming approach
- Experiencing, living the process
- Being active

Least Liked

- Too little time to review answers to homework questions
- Relation of time over the course of simulation not real world
- Too little time spent on team metrics
- In addition to theory, bring examples from practice (industry)
- Teams too big
- Coordination could be improved

Our Lessons learned

- Give enough time for practical part
- Keep theory part short, but useful
- Team size 5-6 seems optimal
- Team building – self organization tips
- Using construction paper, scissors, etc. was a good choice
- Not ideal skipping slides; better to offer complete set vs. classroom slide set?
- Reserve weekly time slot for the online feedback survey
- Ensure that all team's Scrum Boards are secure for the six weeks time
- From simulation to hands-on in mandatory participation in project track

Impediment Backlog

- Finding: Take time to better explain Scrum roles PO, SM
- How can we improve the tight schedule?

Semester Grading

- Mandatory attestations (delivered artifacts):
 - Product Backlog
 - Constructed City
- Comments: Self-organisation of the teams was employed
- Final Exam
